

Let's suppose that we have the index.html file, the movie.swf file and DreamWeaver MX2004 :

- 1) A (very) good idea is to place all the files in the same folder (!)
- 2) Click on "Insert / Media / Flash" (you'll get the "Select File" menu)
- 3) Select the SWF file.
 - be sure that the "URL" is movie.swf
 - be sure that the "Relative to Document" is index.html
- 4) After pressing "OK" you may "Preview in Iexplore" (the HTML file is automatically generated and exported when you'll do that)
