

Using KoolMoves With Serif WebPlus 10

When you purchased WebPlus 10 you may also have purchased a copy of KoolMoves, a Flash™ editing program that allows you to create a multitude of powerful effects (banners, animations, slide shows, buttons, text effects, etc) to add more impact to your Web sites.

Once you've created your effects with KoolMoves, it's very easy to insert them on to your WebPlus site.

In this tutorial we'll show you how to:

- Insert a Flash™ object into a WebPlus document.
- Fine-tune your Flash™ object

Creating Flash™ effects with KoolMoves is beyond the scope of this tutorial.

If you need help with this, please refer to the KoolMoves documentation and Web site at www.koolmoves.com.

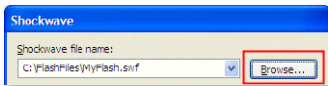

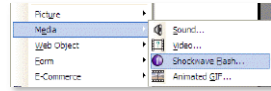

Flash™ (*.SWF) files are viewable movies using the Flash™ Player format. Once placed on the WebPlus page, these files appear as static placeholders that you can cut, copy, move, and resize just like other graphics. The files will then ‘animate’ when previewed or viewed in a Web browser.

To insert a Flash™ file

- 1 On the **Insert** menu, choose **Media**, and then click **Flash**.

- or -

On the Web Objects toolbar, on the **Media** flyout, click the  **Insert Flash File** button.

- 2 In the **Flash** dialog, click **Browse** and then locate and select the .SWF file you want to insert.

To keep the .SWF file separate from the WebPlus file (using a link to the source file) clear the **Embed Flash file in site** option.

Optional step: You can also fine-tune your Flash™ object in this dialog.

For example, you can choose to:

- Start the animation as soon as the page is loaded.
- Loop the animation.
- Set background transparency.
- Add parameters—advanced functionality allowing modification of the object's behaviour on the completed page.

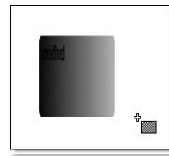

Note that the valid parameters for Flash™ objects vary depending on the object itself. For details, see the documentation relating to your particular Flash™ object.

- 3 When you have selected the required options, click **OK**.

- 4 On the WebPlus page, you'll see the  **Picture Paste** cursor.

Click to insert the file at its default size, or drag to set a custom size.

Congratulations! You have successfully added the Flash™ object to your Web site. Feel free to preview it in your favourite browser.

Should you choose to publish your site to the Internet, WebPlus will automatically upload your Flash™ object for you; no additional work is required on your behalf.
